Agricultural Liming  
Materials Report**

**January 1 to June 30, 2010**

**Agricultural Experiment Station**

**University of Missouri-Columbia**

This bulletin is a detailed report of official samples obtained under the Missouri Agricultural Liming Materials Law collected from January 1 through June 30, 2010. There were 629 official samples collected in this period. All samples are analyzed to determine fineness of grind, calcium carbonate equivalent (CCE), and magnesium content (Mg). Effective neutralizing material (ENM) and effective magnesium (EMg) are calculated from this information, as prescribed by Rule, for each dry sample which meets the minimum specifications of at least 90% passing a U.S. No. 8 sieve and minimum 65% CCE. Products not meeting minimum specifications cannot be sold as agricultural liming materials. Twenty-eight deficient samples are reported, twenty-seven for excessive coarseness and one for low CCE. There were five "stop sale" order's issued against producer stockpiles: all for excessive coarseness, two stop sales for excessive coarseness have been released because of corrections made at the quarry.

Table 1 lists registered producers and samples obtained at production sites.  
Table 2 lists samples obtained from retail distributor stockpiles, by producer.
