

Fair Livestock Superintendent's Biosecurity Checklist

- Before the fair, conduct a meeting with all exhibitors to review biosecurity procedures.
- Examine all animals upon entry to fairgrounds.
- Examine all health certificates for veterinary inspection and appropriate tests.
- Make sure equipment from farms has been cleaned and disinfected.
- Conduct daily walk-through inspection.
- Keep a log of animals with health issues, disease symptoms or infections and report them to the Missouri Department of Agriculture district veterinarian.
- Keep a log of unusual interactions between visitors and animals.
- International travelers should be discouraged from visiting livestock barns. If international travelers are to be given access to livestock barns, they should have already been in the USA for a minimum of five days and have been cleared by the fair livestock superintendent for visitation purposes.
- Conduct daily exhibitor meetings to discuss biosecurity issues and interactions with visitors.
- Display "Wash your hands after touching animals and before eating" signs.
- Lime manure pile daily.
- Make sure each exhibitor leaves with a biosecurity checklist.
